

Hyperbaric Oxygen Therapy Stratford

Hyperbaric Oxygen Therapy Stratford - Therapy called oxidative therapy is carried out by introducing extra energy in the body. The three ways that this can be accomplished is to introduce oxygen inside the body under pressure utilizing Hyperbaric Oxygen, by combining ozone gas in with the blood, or through infusing H₂O₂ or Hydrogen Peroxide in a vein. It only takes a little amount of Hydrogen Peroxide to be able to produce a large amount of oxygen, hence, parts on the body that suffer from poor circulation can benefit greatly from the supply of oxygen.

Oxidative Therapy has been around for many years. During the year 1920, Dr. T.H. Oliver initially made use of Intravenous Hydrogen Peroxide during an epidemic of influenza pneumonia. This successful treatment helped many individuals and results were reported in the Lancet, a British medical journal. Several years later, a paper was published by Dr. Charles Farr entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for doctors who administer H₂O₂.

The theories surrounding this therapy vary in its explanation of the way this treatment works. Several scientists and researchers have discovered that the presence of H₂O₂ in the body is more complicated than originally believed. The benefits of Oxidative Therapy have been show useful for the following health illnesses: Cardiovascular Disease, Cerebrovascular Disease, Coronary spasm, Cardiac arrhythmia, Peripheral Vascular Disease, Asthma, Pulmonary Diseases, COPD, Influenza, Raynaud's Phenomenon, Bronchiectasis, Chronic Bronchitis, HIV, Herpes Simplex, Immune Diseases, Lupus, Multiple Sclerosis, Alzheimer's, Chronic Fatigue, Fibromyalgia, Environmental Poisonings, Rheumatoid Arthritis, Migraines, and Parkinson's Disease, to name some.

As oxidation is a very essential energy producing chemical reaction within the body which makes use of different types of oxygen, the treatment must be carefully controlled to be able to prevent damage to surrounding normal tissue. Anti-oxidants in the type of vitamins and enzymes protect the body from oxidative damage. On the other hand, the immune system uses oxidative energy as a weapon in order to directly kill infectious agents such as yeast, bacteria, parasites and viruses.
