

Ozone Therapy Stratford

Ozone Therapy Stratford - Some individuals claim that ozone has certain superior healing properties. Other people have dismissed these claims, feeling that ozone has no proven benefits. There has been a lot of debate and controversy about this topic over the years.

Recent clinical tests because of the arrival of precise medical ozone generators has enabled the actions, mechanisms, along with possible toxicity of ozone to be evaluated in clinical tests. Ozone could oxidize organic compounds. When present in smog, ozone has various common toxic effects on the respiratory tract. Supporters of ozone therapy say it has numerous health benefits. The gas is made from medical grade oxygen and in medical use, is administered in precise therapeutic doses, never, never by means of inhalation.

Nearly all US states prohibit the promotion of ozone generators, clinical tests in ozone therapy and even research and its medical use. Therapeutic use of ozone is not endorsed by medical associations in any English speaking nations, or by whichever health authorities, hence, doctors who administer or prescribe ozone therapies risk losing their medical licenses. There is anecdotal evidence of ozone therapy being useful and even causing remission in different sicknesses, although, only a few of these life saving administrations have been verified and documented.

Historical Origins of Ozone Therapy

Just sixteen years after it was discovered during the year 1856, ozone was firstly used in health care so as to disinfect operating rooms and sterilize surgical instruments. The use of ozone to disinfect drinking water of viruses and bacteria was well established within mainland Europe by the end of the 19th century.

In the first world war, doctors took advantage of ozone's bacterial capacity, applying ozone topically on infected wounds. It was found that it had hemodynamic properties and anti-inflammatory properties while remedying the infection.

Evidence of Medical Benefits of Ozone Therapy

There are some fantastic advertising claims made by marketers of ozone generators that it is a miraculous treatment for all disease comprising cancer and AIDS, although, these claims remain unproven. Much debate surrounds ozone therapy itself and the equipment. Critics claim that this option has given a lot of people false hope and that it is thus quite dangerous.

There are modest claims stating that the narrow use of ozone through injection into synovial fluid and tissues that surround the bones and joints, and not into blood vessels, simply promotes the body's own mechanisms for healing musculoskeletal lesions along with modest inflammation and tissue oxygenation.
